

## Stand for VideoConferencing

### **INT.1055 VideoConferencing stand-trolley for 2 screens up to 52 inch incl. extra codec and camera plateau**

Videoconferencing is a set of interactive telecommunication techniques, which allows two locations to exchange information at the same time (with vision and sound). This form of visual collaboration is used by companies to meet with their subsidiaries or international partners saving travel costs and time. For videoconferencing, the end-user is often looking for a mobile solution to which two screens, a codec and a camera can be attached. The set would then be suitable for use in multiple rooms. SmartMetals has developed a wheeled stand, suitable for two displays up to 52 inch, with a codec and camera support.

# Stand for VideoConferencing

## Features

**Minimal length:** 1250 mm

**Maximum length: 1600 mm (centre screen)**

**Weight:** 80.00 kg

**Colour:** Dark-Grey & aluminium

**Maximum load: 95 kg**

**Screen configuration: 2 x 1**

**Screen position:** Landscape and Portrait

**Inch range:** up to 55 inch

**Mobile / fixed:** Mobile

**Height adjustment : Manual**

**Bracket/interface:** Included

**Mounting system:** 170 x 140 mm

**Cable duct: 15, 35, 15 mm**
